

MORE POWER FOR CANAL DRAINAGE

Reclamation Service Gets Engines for Clint; New Excavators Coming.

The reclamation service has received two new engines at Clint from the Atlas gas engine works at San Francisco, to be used in the drainage work in the lower valley. The engines weigh seven tons each and are guaranteed to increase in horsepower of 15 percent over engines now being used.

It is the intention of the service to equip four machines on the project with greater power, said L. M. Lawson, project manager. In addition to the fleet on the drainage, four new excavators are being tested at the factory in Indiana previous to their shipment to this project. One intended for the construction of the drainage canal through the San Elizario district near Fabens, and another at Clint for pushing the drainage work through the center of the valley. The remaining two will be used on the portion of the project in New Mexico.

Auto Licenses For Bad Lights May Be Revoked

Improper Lights Must Be Proved In Each Case, However, Decision.

Austin, Texas, July 18.—Answering a series of questions propounded by the state highway commission for a construction of certain features of the state highway law and the chauffeur's license law, it is held by the attorney general's department that the commission may refuse to register a motor vehicle or revoke the registration heretofore granted if it appears that the headlights on such machine are capable of producing a dazzling light or glare, but that the commission has not been granted authority to determine what is a safe and proper headlight, this being a question of fact to be determined in each case.

The use of spotlights are not prohibited if they are arranged so as to be incapable of producing a direct glare at a greater height than a parallel of four feet from the road.

The power to foreclose on any motor vehicle for failure to pay within 30 days the registration fee is vested solely in the highway department.
